

# ■ jQuery Reviewer with Meanings (W3Schools Summary)

## ■ jQuery Tutorial Basics

### jQuery HOME

jQuery is a JavaScript library designed to simplify HTML manipulation, event handling, and animations.

#### Example:

```
<script src="https://code.jquery.com/jquery-3.7.1.min.js"></script>
```

### jQuery Intro

It introduces how jQuery works — using the \$ symbol to access elements and perform actions easily.

#### Example:

```
$(document).ready(function(){ $("p").hide(); });
```

### jQuery Get Started

Shows how to include jQuery using CDN or downloaded file.

#### Example:

```
<script src="jquery.min.js"></script>
$(function(){ alert("jQuery is ready!"); });
```

### jQuery Syntax

Basic format: \$(selector).action() — used to apply actions to selected HTML elements.

#### Example:

```
$("#button").click(function(){ $("p").hide(); });
```

### jQuery Selectors

Used to find HTML elements based on id, class, or tag.

#### Example:

```
$("#id"), $(".class"), $("p")
```

### jQuery Events

Handles user actions like clicks, hovers, or keypresses.

#### Example:

```
$("#button").click(function(){ alert("Button clicked!"); });
```

## ■ jQuery Effects

### jQuery Hide/Show

Shows or hides selected elements.

```
$("#hideBtn").click(function(){ $("p").hide(); });
```

### jQuery Fade

Creates fade-in or fade-out visual effects.

```
$("#fadeIn").click(function(){ $("#box").fadeIn(); });
```

### jQuery Slide

Slides elements up or down smoothly.

```
$("#panel").slideDown();
```

### **jQuery Animate**

Creates custom animations by changing CSS properties.

```
$("#box").animate({left:"250px", opacity:0.5}, 1000);
```

### **jQuery stop()**

Stops the currently running animation.

```
$("#box").stop();
```

### **jQuery Callback**

Runs a function after an animation finishes.

```
$("#box").hide(1000, function(){ alert("Box hidden!"); });
```

### **jQuery Chaining**

Runs multiple jQuery actions on the same element in one line.

```
$("#box").slideUp().slideDown().fadeOut();
```

## **■ jQuery HTML Manipulation**

### **jQuery Get**

Retrieves text, HTML, or input values from elements.

```
alert($("#test").text());
```

### **jQuery Set**

Sets or changes text, HTML, or input values.

```
$("#test").text("Hello World!");
```

### **jQuery Add**

Adds new content before or after existing elements.

```
$("#p").append("<b>Appended text</b>");
```

### **jQuery Remove**

Removes selected elements or their content.

```
$("#p").remove();
```

### **jQuery CSS Classes**

Adds, removes, or toggles CSS classes in elements.

```
$("#div").addClass("highlight");
```

### **jQuery css()**

Gets or sets CSS property values directly.

```
$("#p").css("color", "blue");
```

### **jQuery Dimensions**

Gets or sets the width and height of elements.

```
$("#box").width(300).height(200);
```
